Injection Steps

Subcutaneous Injection steps:

STEP 1: Choose & Clean the Injection Site

• Use the abdomen (3 inches from the belly button), thigh, or upper arm. Rotate sites to prevent irritation. Clean the area with an alcohol swab and let it dry.

STEP 2: Inject the Medication

• Pinch 1–2 inches of skin, insert the needle at a 45° or 90° angle, and slowly push the plunger down.

STEP 3: Remove the Needle & Dispose

• Pull the needle out at the same angle, apply light pressure with gauze (don't rub), and dispose of the syringe in a sharps container.

STEP 4: Monitor for Reactions

• Mild redness or soreness is normal. Seek medical help if you experience severe pain, swelling, or an allergic reaction.

Intramuscular Injection steps:

STEP 1: Choose & Clean the Injection Site – Use the thigh (vastus lateralis), upper arm (deltoid), or glute (ventrogluteal or dorsogluteal muscle).

Rotate sites to prevent soreness. Clean the area with an alcohol swab and let it dry.

STEP 2: Inject the Medication

• Stretch the skin taut, hold the syringe like a dart at a 90° angle, and insert the needle quickly and smoothly. Slowly push the plunger down to inject the medication.

STEP 3: Remove the Needle & Dispose

• Pull the needle straight out, apply light pressure with gauze (don't rub), and dispose of the syringe in a sharps container.

STEP 4: Monitor for Reactions

• Mild soreness or redness is normal. Seek medical help if you experience severe pain, swelling, or an allergic reaction.
